

JAMES BAY FIELDWORK UNDERWAY

CDN Maverick combines active fieldwork in James Bay with a 100%-owned Nevada gold project and investments that extend its exposure beyond the projects it operates directly. Its project-generator approach provides flexibility to explore, partner, transact or retain an economic interest as projects advance.

BACKPACK DRILLING UNDERWAY AT NOTTAWAY + CHABINOCHÉ

68

SITES IN
EACH PHASE

Phase 1 tests priority target areas; Phase 2 expands regional coverage. Bedrock and bottom-of-till samples will help prioritize lithium-pegmatite targets beneath glacial cover and help define Winter Drill Program Targets.

JAMES BAY

Current working claim position as at June 30, 2026.

NOTTAWAY | CURRENT TECHNICAL FOCUS

Historical sulphides. Priority conductors.

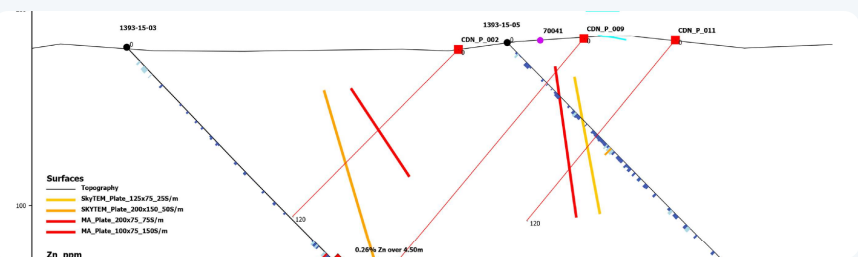

DRILL AUTHORIZATION IN PLACE

Five historical SOQUEM holes totalled approximately 875 metres and included a reported 2.85-metre massive sulphide interval. Later reinterpretation of the geophysical work identified several principal conductors that were not directly tested by the historical holes.

PLANNED WINTER DRILLING

2,000–2,700 m

Authorization issued Feb. 16, 2026; valid two years, with a 12-month renewal available.

Red lines show planned holes positioned to test modelled conductive plates near historical drilling.

CHABINOCHÉ

Immediately southeast of Q2 Metals' Cisco discovery, within the same Frotet–Evans Greenstone Belt. Current fieldwork is testing selected lithium-pegmatite targets across Chabinoche and Nottaway.

PONCHEVILLE

The southern portion of CDN's James Bay position. Historical datasets identify mapped pegmatite dykes and lithium-pathfinder indicators for follow-up.

RAINBOW CANYON GOLD PROJECT | NEVADA

GOLD IN NEVADA

Rainbow Canyon is a 100%-owned, early-stage gold project in Nevada's historic Olinghouse Mining District, approximately 39 km east of Reno. Historical work documented a structurally controlled system with gold in quartz veins and altered host rock.

2018 technical-report basis

Ground magnetics identified lows that coincide with mapped veining and alteration. The data is helping CDN determine where the next work should focus.

WHAT'S NEXT

- Backpack drilling: Help define targets for the planned winter drill program.
- Nottaway drilling: Test priority conductors for polymetallic mineralization.
- Rainbow Canyon: Which targets should move into the next work program.
